MEMORANDUM

TO: Division File

FROM: Jerry Willman *JW*

DATE: December 18, 2006

SUBJECT: Sediment Sample Locations for Eagle Zinc

RE: 1358070001 Montgomery Co.
Eagle Zinc Company
Superfund/HRS

This memorandum is intended to further document information regarding samples collected at the Eagle Zinc Company site during a field event in April of 2005. The field event was performed as an addendum to the Expanded Site Inspection.

I was assigned the task of collecting most of the samples during the sampling event while Bob Casper, the project manager followed along directing activities and making field notes and photo documentation at each location. I distinctively remember collecting both sediment samples X201 and X210 from the east side of the Lake Hillsboro.

Specifically, as I recall, sample location X201 was accessed from private property and collected from sediments below the surface of the water in Lake Hillsboro.

Sample location X210 was obtained from what I believe was public property adjacent to the drainage way leading from the site into the lake. Specifically, sample X210 was collected from sediments below the surface of the water in Lake Hillsboro where contamination from the Eagle Zinc Site would have most likely entered the Lake via the drainage way.
